

This file shows how to use produce Hindi output  
with Latex and Lyx.

July 21, 2008

Export the file as Latex (pdflatex) which will produce a file with same name  
and extension as .tex.

Run this file through xelatex from the command prompt, like this.

c:> xelatex <complete physical path of the file with .tex extension>

This will generate a .pdf version of the file with the same name.

```
\usepackage{fontspec}  
\usepackage{xunicode}  
\usepackage{xltextra}
```

एक राजा था उसने अपनी प्रजा से कहा, मुझे बहुत सारा पैसा कर में चाहिए क्योंकि  
में पड़ोसी राज्य से युद्ध छेड़नेवाला हूं।
